

Obuya Platform Plan v2.0

The final, improved version of the Obuya Shop, Academy, Foundation and Partnerships design. It incorporates the remedies from the council design review, and every part of the plan names the flaws it fixes.

40/40

review flaws resolved

10

Critical fixed

plan sections

Version

2.0 (replaces v1.0 design set)

Date

15 September 2026

Launch market

Kenya · KSh · M-Pesa

How to read this plan

Each part of the plan ends with a **SOLVES** line naming the flaw IDs it fixes (F01–F40, from the companion document *Design Review: Flaws & How to Overcome Them*). The colour shows how severe the original flaw was: **F00 Critical** **F00 High** **F00 Medium**. The traceability matrix at the end maps every flaw to where it is solved.

★ What changed from v1.0

The ten most important changes, and the problem each one removes.

V1.0 PROBLEM

V2.0 SOLUTION

× Refunds were issued only as expiring coupons with a minimum order value	✓ Refund to the original card or M-Pesa account; store credit is optional, via a wallet F18 Refunds only as expiring coupons
× Payment happened before the order existed; payment boxes in DFD2 had no connections	✓ Order created as PENDING_PAYMENT, confirmed by an idempotent webhook F04 Payment comes before the order, and the payment flow is disconnected
× Stock was not held during payment, so the last unit could sell twice	✓ 15-minute stock reservation (RESERVE → SALE / RELEASE) F05 No stock reservation, so the last unit can sell twice
× Price only calculated at checkout; ₹ and KSh mixed across documents	✓ Kenya first, prices in KSh by region from the first page F06 Price is only calculated at checkout F01 Two markets mixed in one design
× Obuya packs vs vendor ships: documents contradicted each other	✓ Two fulfilment modes: MARKETPLACE_DIRECT and OBUYA_HUB F02 Documents disagree on who packs and ships
× No cancellation, late-dispatch or failed-delivery paths	✓ Full state machine with cancellation, SLA escalation and delivery exceptions F12 No way to cancel an order F14 Missing the 2-day dispatch rule doesn't affect the customer F15 Failed, lost or damaged deliveries not handled
× Academy, Foundation and schools missing from the database	✓ Enrolments, guardians, donations, allocations, organisations and B2B invoices F28 Academy flow has no data model and its discount can be abused F30 Foundation purchases can't be recorded F33 Schools can't buy the way schools actually buy
× Donation money and children's data had no governance	✓ Separate Foundation entity, guardian consent, safeguarding policy, ODPC registration F31 No governance for donation money F32 Children's photos and data collected without safeguards
× Vendors unverified, rated by an undefined formula and paid with no ledger	✓ KYC, courier-scan SLA, published 90-day formula, escrow ledger F24 No vendor identity checks or staff accounts F22 2-day dispatch rule is unfair and easy to fake F23 Rating formula undefined and polluted by courier issues F25 No commission ledger, escrow or payout rules
× One-club exclusivity closed the marketplace	✓ Tiered, time-limited, category-limited partnerships F34 One-club exclusivity undermines the marketplace

v2.0 platform modules

Twelve modules, each responsible for its own data. The numbered sections that follow describe how they behave.

Identity & Organisations

Users, guardians, vendor staff, schools, clubs, RBAC, consents

Catalog & Pricing

Sports taxonomy, variants, bundles, regional price lists

Inventory

One stock ledger with reservations

Cart & Checkout

Purpose per line, package grouping, fixed step order

Payments & Ledger

Payment intents, webhooks, wallet, vendor ledger, payouts

Orders & Fulfilment

State machine, SLA engine, hub and direct modes

Returns & Exchanges

Platform policy, auto-approval, disputes

Promotions

Rules, coupons, funding, stacking

Vendor Hub

KYC, brand authorisation, performance

Academy

Programmes, enrolments, member pricing

Foundation

Needs list, donations, allocation, impact

B2B & Partnerships

Quotes, LPOs, invoices, club contracts

Shared services underneath all modules: notifications (WhatsApp, SMS, email, based on each user's preferences), audit logs, idempotency, support queues with response targets. **Solves:** F37, F39, F40

1 Foundational decisions

These four decisions settle the contradictions that ran through the original documents. Everything else in this plan builds on them.

D1 • Launch in Kenya first, in KSh

- Base currency is KSh. Payments by M-Pesa STK push, Airtel Money and cards through a hosted gateway.
- Every mockup is redrawn in KSh with Kenyan addresses. International selling is Phase 3, with prices set by shipping destination.
- ORDERS and ORDER_ITEMS store currency and fx_rate from day one, so adding markets later doesn't need a schema change.

✓ **SOLVES** **F01** Two markets mixed in one design **F07** 'Higher margins for richer countries' pricing

D2 • Two explicit fulfilment modes

- MARKETPLACE_DIRECT: the vendor picks, packs and hands to the courier. Used for ordinary retail orders.
- OBUYA_HUB: items go to the Obuya hub for quality check, kitting and consolidated delivery. Used for Foundation, school and Obuya-brand orders.
- fulfilment_mode is stored on every vendor sub-order, and every diagram shows which mode applies.

✓ **SOLVES** **F02** Documents disagree on who packs and ships

D3 • Master reference sheet

- One sports list, managed as admin data (Football, Cricket, Rugby, Basketball, Tennis, Athletics, ...), never hard-coded in screens or diagrams.
- One school journey (6 steps), one set of status names and one glossary. Each diagram carries a version number and is redrawn from this sheet.

✓ **SOLVES** **F03** Sports list, school steps and terms don't match

D4 • A diagram set developers can build from

- DFD2 is replaced by a levelled DFD. Level 0 is the context diagram. Level 1 has 12 processes: Catalog, Pricing, Cart/Checkout, Payments, Orders/Fulfilment, Returns, Promotions, Vendor Hub, Academy, Foundation, B2B and Partnerships.
- Every node connects to at least one flow and one data store. Orphan boxes are not allowed.

✓ **SOLVES** **F37** DFD2 has orphan nodes and gaps

2 Improved customer checkout

The checkout is reordered so the price is known from the first page, stock and coupons can't be used twice, and no payment can exist without an order.

Step 1 · Session start and local prices

- Country is detected from IP and confirmed with a picker in the header. It sets the price list stored on the cart.
- Prices are shown in KSh, VAT included, from the first page onwards.

✓ **SOLVES** **F06** Price is only calculated at checkout **F07** 'Higher margins for richer countries' pricing

Step 2 · Product page

- Stock shown is available stock (quantity – reserved_qty). The page shows a dispatch estimate from that product's SLA and the platform-wide return policy.

✓ **SOLVES** **F05** No stock reservation, so the last unit can sell twice **F19** Vendors decide their own returns

F22 2-day dispatch rule is unfair and easy to fake

Step 3 · Cart, grouped by package

- Each line carries a purpose: For me, Foundation athlete, or Gift. A donation is a separate, optional line.
- Items are grouped by vendor, each group with its delivery estimate and shipping cost, so the customer knows before paying that several parcels will arrive.

✓ **SOLVES** **F13** One order becomes many unexplained parcels **F30** Foundation purchases can't be recorded

Step 4 · Checkout in a fixed order

- Guest or logged-in checkout. Guests give email and phone, and the address is copied onto the order.
- Order of steps: address → price locked for the destination → shipping per group → VAT → coupon validated last → full total.
- The coupon is re-checked automatically whenever the cart or the address changes.

✓ **SOLVES** **F08** Coupon checked too early, with double-spend risk **F09** No model for tax, VAT, duties or shipping rates

F17 Guest checkout can't actually work

Step 5 · Order created, then paid

- The order is created as PENDING_PAYMENT, with an idempotency key.
- Stock is reserved for 15 minutes, and the coupon use is reserved in the same database transaction.

✓ **SOLVES** F04 Payment comes before the order, and the payment flow is disconnected

F05 No stock reservation, so the last unit can sell twice

F08 Coupon checked too early, with double-spend risk

F39 No consent, legal terms, audit trail or idempotency

Step 6 · Payment

- Card entry uses hosted or tokenised gateway fields. M-Pesa uses STK push.
- Payment is confirmed by the gateway webhook, with a status query as backup. A daily job reconciles against settlement statements.
- If payment fails, the cart is kept and the customer can retry in one tap or switch method. Unpaid orders expire and release their stock.

✓ **SOLVES** F04 Payment comes before the order, and the payment flow is disconnected

F11 Card data handling (PCI scope) not defined

Step 7 · Confirmation

- Reserved stock becomes SALE. Discounts and shipping are split across order lines by value and stored.
- Vendor sub-orders are created with a dispatch_deadline in business days. The customer gets one confirmation on the channel they chose.

✓ **SOLVES** F10 Nobody decides who pays for discounts or how they split

F22 2-day dispatch rule is unfair and easy to fake

F39 No consent, legal terms, audit trail or idempotency

Step 8 · One order page

- A single order page with a separate timeline for each package. Updates are bundled into one digest instead of one message per vendor.

✓ **SOLVES** F13 One order becomes many unexplained parcels

3 Order lifecycle, cancellation and delivery exceptions

Statuses become a strict state machine with a history log, and the unhappy paths get their own flows.

State machine with a status history

- Order: PENDING_PAYMENT → PAID → PARTIALLY_SHIPPED → SHIPPED → PARTIALLY_DELIVERED → DELIVERED → COMPLETED. It can end as EXPIRED or CANCELLED instead.
- Vendor sub-order: AWAITING_DISPATCH → PICKED_UP (courier scan) → IN_TRANSIT → OUT_FOR_DELIVERY → DELIVERED.
- The parent order's status is derived from its sub-orders. Only the courier webhook sets DELIVERED, and an admin override is audited. Every change is written to STATUS_HISTORY.

✓ SOLVES **F16** Order statuses are free text, not a state machine

Cancellation

- Customers can cancel any sub-order until the courier picks it up. The refund goes back to the original payment method automatically, and stock is released.
- A vendor can reject an order (out of stock), but it counts against their accuracy score. Admins can cancel for fraud, with the reason recorded.

✓ SOLVES **F12** No way to cancel an order

What happens when dispatch is late

- Deadline missed: the customer is told the new expected date and offered a one-tap cancel.
- Deadline plus 2 business days: the order is cancelled and refunded automatically, or moved to another vendor with the same item in stock. The late vendor is flagged.

✓ SOLVES **F14** Missing the 2-day dispatch rule doesn't affect the customer

Delivery exceptions

- DELIVERY_FAILED → customer has 24 h to fix the address → up to 2 retries → RETURNING_TO_VENDOR → automatic refund once the parcel is received back.
- LOST or DAMAGED: the customer is refunded or sent a replacement straight away, and Obuya recovers the cost from the courier or the vendor through the ledger.

✓ **SOLVES** **F15** Failed, lost or damaged deliveries not handled

4 Returns, refunds and exchanges

The customer's money is returned as money, the platform (not the vendor) sets the rules, and exchanges become a real flow.

One platform-wide return policy

- Obuya publishes the return window and eligibility rules. Vendors can't override them. Category exceptions, such as custom-printed kits, are set by the platform.

✓ **SOLVES** **F19** Vendors decide their own returns

Return decisions

- The system checks eligibility and auto-approves clear cases (inside the window, and the photo shows damage or a wrong item).
- Otherwise the vendor has 48 h to decide. If they don't reply, the return is approved automatically.
- Disputes go to an admin queue and are decided within 5 business days. If the vendor's rejection is overturned, it counts against their rating.

✓ **SOLVES** **F19** Vendors decide their own returns **F21** Return coupons wait on manual admin work

F40 Admin bottleneck, 'always available' support and heavy UX

Refund to the original payment method

- By default the refund goes back to the card or M-Pesa account. Store credit is optional (with a +5% bonus) and is paid into a WALLET ledger with no minimum order and 24 months' validity.
- The system issues refunds automatically. RETURN_BALANCE_COUPONS is removed.

✓ **SOLVES** **F18** Refunds only as expiring coupons **F21** Return coupons wait on manual admin work

Exchange flow

- The customer picks a new size or variant. That stock is reserved, and the replacement ships when the courier collects the return (or immediately for trusted customers). No extra payment if the price is the same.

✓ **SOLVES** **F20** Exchanges promised but not designed

Exact refund amounts and cost recovery

- The refund is the discounted price actually paid for that line. Who pays for return shipping depends on the reason. Vendor-fault costs are taken back through the vendor ledger.

✓ **SOLVES** **F10** Nobody decides who pays for discounts or how they split **F25** No commission ledger, escrow or payout rules

5 Vendor programme

Vendors are verified before they sell, measured with a published formula based on courier data, and paid from a ledger.

Verified onboarding

- KYC documents: KRA PIN, CR12/registration, ID, bank or M-Pesa till verification and a tax compliance certificate. The vendor agreement is signed with a timestamp.
- VENDORS.kyc_status controls listing and payouts. VENDOR_USERS and role-based access give each staff member their own login, and every query is scoped by vendor_id.

✓ SOLVES F24 No vendor identity checks or staff accounts

Brand and licence protection

- Restricted brands and club merchandise can only be listed with an approved BRAND_AUTHORIZATIONS record.
- Notice-and-takedown process, with a three-strike policy and penalties applied through the ledger.

✓ SOLVES F26 No counterfeit or licensing controls

A fair dispatch SLA

- The clock starts at payment confirmation and counts business days, with a 2 pm cutoff and a holiday calendar. dispatch_sla_days can be set per product.
- Dispatch time is the courier's first pickup scan, not a tracking number the vendor types in. On-time is calculated from those dates, never stored.

✓ SOLVES F22 2-day dispatch rule is unfair and easy to fake

A published rating formula

- Score = 35% on-time dispatch + 25% order accuracy + 15% low return rate + 15% product and packaging reviews + 10% median response time. Measured over a rolling 90 days.
- Vendors with fewer than 20 orders show a 'New vendor' badge instead of a score. Delivery reviews rate the courier, not the vendor. Probation and an appeal come before any deactivation.

✓ SOLVES F23 Rating formula undefined and polluted by courier issues

Ledger, escrow and payouts

- COMMISSION_RULES are set per category and vendor, with effective dates. VENDOR_LEDGER is append-only (SALE, COMMISSION, GATEWAY_FEE, REFUND_CLAWBACK, PAYOUT).
- Funds are released after delivery plus the return window. Payouts run weekly, with a 10% rolling reserve. Each promotion records who pays for it (funded_by).

✓ SOLVES F25 No commission ledger, escrow or payout rules F10 Nobody decides who pays for discounts or how they split

One source of truth for stock

- INVENTORY (per variant, optionally per location) is changed only through INVENTORY_TRANSACTIONS (RESERVE, SALE, RELEASE, ADJUST, RETURN). Every manual adjustment is audited.

✓ **SOLVES**

F27 Stock stored in two places

F05 No stock reservation, so the last unit can sell twice

F39 No consent, legal terms, audit trail or idempotency

6 Obuya Academy

Enrolment becomes real data, member pricing can't be shared or stacked, and guardians stay in control.

Guardian-led accounts

- A parent or guardian account holds linked child profiles. The guardian consents to data use and pays for purchases, so minors never pay directly.

✓ **SOLVES** **F28** Academy flow has no data model and its discount can be abused

F32 Children's photos and data collected without safeguards

Enrolment-based member pricing

- ACADEMY_PROGRAMS and ENROLLMENTS (program, level, status, valid_until). The server applies member pricing only while an enrolment is active. There is no shareable code.
- Spending caps per term, and eligibility ends automatically when the enrolment does.

✓ **SOLVES** **F28** Academy flow has no data model and its discount can be abused

One stacking rule

- The customer gets the better of the bundle price or the member discount, never both, unless an admin campaign is explicitly marked stackable.

✓ **SOLVES** **F28** Academy flow has no data model and its discount can be abused

F08 Coupon checked too early, with double-spend risk

Bundles that don't break

- A bundle is a virtual SKU. Its availability is the lowest stock of any item in it, and an approved substitute is swapped in automatically. Coaches curate bundles by programme and level.

✓ **SOLVES** **F29** Bundles and Obuya-brand gear have no owner

Obuya-brand gear

- Obuya-brand products belong to an internal 'Obuya Brand' vendor using OBUYA_HUB fulfilment, held to the same dispatch SLA, ratings and ledger as any other vendor.

✓ **SOLVES** **F29** Bundles and Obuya-brand gear have no owner

7 Obuya Foundation

Donations are transparent, legally separate and child-safe, and the Foundation receives the items it actually needs.

A separate legal and financial entity

- The Foundation is registered as its own charitable entity with its own bank or M-Pesa account. Donation receipts are issued automatically.
- The give-back percentage for each product is published, along with annual audited financial and impact reports.

✓ SOLVES **F31** No governance for donation money

Giving that matches real need

- Purpose is set per cart line, and a mixed cart is allowed. Foundation lines always use OBUYA_HUB and ship to the Foundation, and they can't be returned.
- Donors buy from the Foundation Needs List (items and size mix set by the Foundation) or give Kit Credit, instead of guessing sizes.

✓ SOLVES **F30** Foundation purchases can't be recorded **F02** Documents disagree on who packs and ships

Allocation data

- DONATIONS, FOUNDATION_STOCK, BENEFICIARIES (minimal fields, restricted access), ALLOCATIONS and IMPACT_REPORTS. Donors get updates that never identify an individual child.

✓ SOLVES **F30** Foundation purchases can't be recorded **F32** Children's photos and data collected without safeguards

Safeguarding and data protection

- Verifiable guardian consent is collected at enrolment and at allocation. Photos are anonymised by default, and a child is only identified with explicit consent.
- A safeguarding policy with background checks for coaches and staff. A DPO is appointed, Obuya registers with the ODPC, media is kept in private storage behind signed URLs, and retention limits apply.

✓ SOLVES **F32** Children's photos and data collected without safeguards

8 Schools and club partnerships

Schools get procurement that fits how they buy, and club deals add revenue without closing the marketplace.

School accounts with approvals

- ORGANIZATIONS (type SCHOOL, CLUB or FOUNDATION) and ORG_MEMBERS with roles: a coach requests, the bursar or head approves.
- The 6-step journey: Enquire → Needs assessment → Agreement & portal → Order → Hub fulfilment → Ongoing support.

✓ **SOLVES** **F33** Schools can't buy the way schools actually buy **F03** Sports list, school steps and terms don't match

B2B checkout

- Quote → pro-forma invoice (usable in a tender) → LPO upload → invoice on account within a credit limit (net 30-90) → KRA eTIMS invoice.
- Institutional price lists, recurring orders by school term, and one consolidated delivery through OBUYA_HUB.

✓ **SOLVES** **F33** Schools can't buy the way schools actually buy **F02** Documents disagree on who packs and ships
F09 No model for tax, VAT, duties or shipping rates

Tiered club partnerships

- An Official Premier Partner gets homepage placement, category sponsorship and co-branded drops. Other licensed clubs can still sell on the platform.
- Any exclusivity lasts at most 12 months, covers one category, is tied to performance targets with exit terms, and is stored in PARTNERSHIP_CONTRACTS. School and academy team kits are never restricted.

✓ **SOLVES** **F34** One-club exclusivity undermines the marketplace **F26** No counterfeit or licensing controls

Revenue discipline

- A unit-economics model for each channel (retail, academy, school, foundation, club) covering acquisition cost, net take rate after gateway fees, shipping subsidy and return cost. A minimum take rate and a margin floor on promotions.

✓ **SOLVES** **F35** No numbers behind the revenue model **F10** Nobody decides who pays for discounts or how they split

Honest positioning

- The Jumia/Decathlon comparison is replaced by 'What you get with Obuya', listing only features that are live.

✓ **SOLVES** **F36** Competitor comparison can't be backed up

9 Trust, compliance and operations

The controls the rest of the plan depends on.

Consent and legal documents

- Terms of Service, privacy policy, cookie notice and vendor agreement. A CONSENTS table records the policy version and timestamp.
- Marketing opt-in is separate from account consent. Every message has an unsubscribe link, and users choose their channels (WhatsApp, SMS or email).

✓ SOLVES F39 No consent, legal terms, audit trail or idempotency

Audit and reliability

- AUDIT_LOGS records the actor, the entity and the before and after values for price, stock, refund and grievance changes. IDEMPOTENCY_KEYS protect payment and webhook handlers.

✓ SOLVES F39 No consent, legal terms, audit trail or idempotency

F04 Payment comes before the order, and the payment flow is disconnected

Verified reviews

- PRODUCT_REVIEWS allows one review per delivered order line. Separate questions cover product, packaging and delivery. Reviews go through moderation before they're published.

✓ SOLVES F38 Product reviews not modelled or verified F23 Rating formula undefined and polluted by courier issues

Support and admin capacity

- The chatbot runs 24/7. Human support is available 8 am–8 pm EAT with a first reply in under 2 hours, and WhatsApp or SMS as a fallback.
- Admin work queues with response targets for vendor approvals, disputes and school quotes. Routine rules run automatically.

✓ SOLVES F40 Admin bottleneck, 'always available' support and heavy UX F21 Return coupons wait on manual admin work

Built for Kenyan mobile users

- Mobile-first PWA with compressed images, a lightweight order-tracking page, and the option to get order updates by SMS.

✓ SOLVES F40 Admin bottleneck, 'always available' support and heavy UX

10 Data model v2 changes

Changes to the original ERD (database_shop.png). Tables not listed stay as they were.

ENTITY	NEW OR CHANGED	SOLVES
ORDERS / ORDER_ITEMS	PENDING_PAYMENT state; currency and fx_rate; price snapshot; guest_email and guest_phone; address copied onto the order; per-line purpose, tax, and prorated discount and shipping	F04 F01 F06 F17 F30 F09 F10
PAYMENT_TRANSACTIONS	Replaces the single PAYMENTS row: capture, refund and chargeback entries with gateway reference and idempotency key	F04 F10 F11
PRICE_LISTS / PRICE_LIST_ITEMS	Price per region and organisation: cost, vendor margin, platform margin, sell price	F06 F07 F33
SHIPPING_ZONES / SHIPPING_RATES / TAX_RULES	Shipping cost per destination and vendor; VAT by country and category	F09
INVENTORY / INVENTORY_TRANSACTIONS	Only source of stock; reservations (RESERVE, SALE, RELEASE); stock_qty removed from variants	F05 F27
PROMOTIONS / COUPONS / COUPON_USAGES	Rules live only on promotions; per_user_limit, stackable, priority, funded_by; UNIQUE(coupon, order)	F08 F10
STATUS_HISTORY	Every status change: entity, from, to, actor, time	F16
SHIPMENTS	Courier pickup scan time, exception states, retry count, claim reference	F15 F22
WALLETS / WALLET_LEDGER	Opt-in store credit; replaces RETURN_BALANCE_COUPONS	F18
RETURNS / EXCHANGES	Auto-approval flag, vendor response deadline, grievance decision deadline, replacement variant	F19 F20 F21
VENDORS / VENDOR_USERS / ROLES	KYC fields and documents, kyc_status, contract_signed_at, role-based access for staff	F24
BRAND_AUTHORIZATIONS	Licence proof for restricted brands and club merchandise; takedown strikes	F26 F34
COMMISSION_RULES / VENDOR_LEDGER / PAYOUTS	Commission rates, escrow, clawbacks, weekly payouts, rolling reserve	F25
VENDOR_PERFORMANCE (snapshots)	Periodic metrics per 90-day window, calculated from source dates	F22 F23
PRODUCT_REVIEWS	Verified purchase, one per order line, moderation status	F38
ACADEMY_PROGRAMS / ENROLLMENTS / GUARDIANS	Programme, level, status, valid_until; guardian-to-child links	F28 F32
BUNDLES / BUNDLE_ITEMS / SUBSTITUTES	Virtual SKUs with calculated availability	F29

ENTITY	NEW OR CHANGED	SOLVES
DONATIONS / FOUNDATION_STOCK / BENEFICIARIES / ALLOCATIONS / IMPACT_REPORTS	Foundation giving, stock, allocation and impact, with restricted access	F30 F31 F32
ORGANIZATIONS / ORG_MEMBERS / QUOTES / INVOICES	School, club and foundation accounts; approvals; credit terms; eTIMS invoices	F33
PARTNERSHIP_CONTRACTS / AD_PLACEMENTS	Tier, category, region, exclusivity window, fees, commission	F34 F35
CONSENTS / NOTIFICATION_PREFS / AUDIT_LOGS / IDEMPOTENCY_KEYS	Consent records, channel preferences, audit trail, safe retries	F39 F40

11 Phased roadmap

All Critical marketplace flaws are fixed in Phase 1. Academy, Foundation and school features launch only once their data model and safeguards are in place.

Phase 1 · Trustworthy Kenyan marketplace (Months 0–4)

- Decisions D1–D4 and the redrawn diagram set
- Reordered checkout, reservations and PENDING_PAYMENT
- State machine, cancellation and delivery exceptions
- Refunds to original payment method, wallet and exchanges
- Vendor KYC, ledger, escrow, SLA and rating formula
- Consent, audit logs, idempotency

✓ **SOLVES 29 FLAWS** (6 Critical · 15 High · 8 Medium)

Phase 2 · Academy, Foundation and Schools (Months 4–8)

- Guardian accounts, enrolments, member pricing and bundles
- Foundation entity, needs list, allocation and safeguarding
- School organisations, approvals and B2B checkout
- Obuya hub operations and support queues with response targets

✓ **SOLVES 7 FLAWS** (4 Critical · 1 High · 2 Medium)

Phase 3 · Partnerships and new markets (Months 8+)

- Tiered club partnerships and licensed merchandise
- Unit-economics dashboard and a revised public positioning page
- Prices by shipping destination, DDP shipping to new countries

✓ **SOLVES 4 FLAWS** (0 Critical · 2 High · 2 Medium)

Definition of done for each phase: the redrawn diagrams for that phase are signed off, every flaw ID listed has an acceptance test (for example "a refund for F18 goes back to the original M-Pesa number"), and legal points have been confirmed by a Kenyan advocate.

12 Traceability matrix: flaw → solution

Every flaw from the design review, and the part of this plan that resolves it.

ID	PREVIOUS PROBLEM	SEVERITY	SOLVED BY (PLAN SECTION · ITEM)
F01	Two markets mixed in one design	HIGH	\$1 · D1 · Launch in Kenya first, in KSh
F02	Documents disagree on who packs and ships	CRITICAL	\$1 · D2 · Two explicit fulfilment modes \$7 · Giving that matches real need \$8 · B2B checkout
F03	Sports list, school steps and terms don't match	MEDIUM	\$1 · D3 · Master reference sheet \$8 · School accounts with approvals
